

Sidharth Sreekumar

Software Engineer

Kerala, India — +91 9645332233 — sidharthsm@gmail.com
[linkedin.com/in/sdd410](https://www.linkedin.com/in/sdd410) — github.com/sdd410 — sdd410.github.io

Results-driven Software Engineer experienced in building scalable backend microservices, RESTful APIs, and distributed systems using Java, Spring Boot, and AWS. Proven track record in CI/CD automation, performance profiling, and enterprise integrations. Additionally brings cross-functional leadership experience in hospital operations, focusing on patient care quality improvements and workflow optimization.

Technical Skills

Languages: Java, Python, C++, JavaScript, SQL

Backend & Data: Spring Boot, gRPC, Redis, PostgreSQL, MySQL, Neo4j

Cloud & DevOps: AWS, Docker, Git, CI/CD (GitHub Actions, ArgoCD)

AI Dev Tools: GitHub Copilot, Claude Code, LangChain, GPT-4o API

Performance Engineering: Load Testing, Java Flight Recorder (JFR) Analysis, JVM Profiling, Grafana, Kibana

Concepts: Data Structures & Algorithms, Object-Oriented Design, Microservices, REST APIs, Scalability, High Availability, System Design

Experience

Software Engineer – Verteil Technologies Pvt. Ltd

Oct 2023 – Present

- Serve as co-code owner for the Riyadh Air integration, contributing to backend development, code reviews, and production maintenance.
- Designed and implemented **RESTful APIs** secured with **OAuth 2.0** and **JWT** to standardize airline data retrieval across multiple partner airlines.
- Built and deployed scalable **microservices on AWS** using **Java 18+**, **Spring Boot**, **PostgreSQL**, and **Redis**, utilizing **GitHub Copilot** and **Claude Code** to accelerate feature scaffolding and API integration by 30%.
- Designed and integrated **gRPC-based inter-service communication** to enable low-latency communication between microservices.
- Automated **CI/CD pipelines** using **GitHub Actions** and **ArgoCD**, integrating comprehensive **unit and acceptance testing** to minimize deployment failures.
- Conducted load testing on backend services to validate throughput and latency under peak traffic conditions.
- Performed JVM performance analysis using **Java Flight Recorder (JFR)** to diagnose memory, GC, and CPU bottlenecks.
- Improved system observability by building **Kibana and Grafana dashboards**, reducing MTTR for production issues.

Software Engineering Intern – Verteil Technologies Pvt. Ltd

Mar 2023 – Jul 2023

- Built backend services using **Java**, **Spring Boot**, and **REST APIs** for airline data processing workflows.
- Worked closely with senior engineers in Agile sprints, learning best practices in clean code and debugging.

Projects

Security & Surveillance using Swarm Drones

(2022 – 2023)

- Implemented flight-path algorithms and real-time object detection in **Python** to coordinate autonomous drone swarms.

Sign Language Detection

(2022 – 2023)

- Built a **CNN-based computer vision model** using OpenCV to recognize sign language gestures for real-time translation.

Chronic Kidney Disease Prediction

(2021 – 2022)

- Applied machine learning algorithms including **Logistic Regression**, **Random Forest**, and **SVM** to predict disease risk.
- Improved model accuracy through **feature selection** and **hyperparameter tuning**.

Education & Certifications

B.Tech in Computer Science and Engineering – Amrita School of Engineering

May 2023

Certifications: Python (Basic), SQL (Basic), SQL (Intermediate) – HackerRank — C Programming, HTML & CSS – Coursera
